

Supported by Group Synergy, RMKO's Performance Grows Significantly in January 2026

Jakarta, February 18, 2026 PT Royaltama Mulia Kontraktorindo Tbk (RMKO IJ) a construction company focused on mining services, heavy equipment rental, and construction, today announced impressive operational performance for the January 2026 period. This performance was driven by follow-on demand from RMKE's completed coal hauling road which directly connected to potential mining areas in South Sumatra.

As part of the RMK Group, RMKO is committed to supporting the group's long-term plans by offering efficient mining services and heavy equipment rental. With the operation of the new hauling road, RMKO can now serve mines that have become new clients of RMKE.

In supporting RMKE, RMKO provides mining services with success indicators including Overburden (OB) removal and coal production from third-party mines. Additionally, RMKO also offers support through heavy equipment rental services, the performance of which is measured by the volume of transportation via the hauling road and coal loading onto trains through the Train Loading System (TLS).

In January 2026, the heavy equipment rental segment showed continuous operational performance growth since last year, when the RMKE hauling road became fully operational. TLS volume successfully increased by 3.7 times. RMKO managed to load 200 thousand tons of coal onto trains, a significant increase compared to 42.9 thousand tons in the same period last year. This rise in TLS volume was supported by an 80.8% year-on-year (yoy) increase in hauling volume, from 16.3 thousand tons to 29.5 thousand tons. In addition to the hauling volume handled by RMKO, TLS volume also increased, supported by hauling volume handled by third parties utilizing the same road.

Meanwhile, from the mining services segment, RMKO has begun working on third-party mines that have been RMKE's customers since 2025. With the agreement on an option to purchase coal stock at the mine RMKO proactively contributes by providing integrated mining services.

William Saputra, Director of RMKO, stated, "RMKO has successfully improved its operational performance significantly since the end of last year, and we are very optimistic to see this strong growth continue into the beginning of this year. We will continue to strengthen inter-group synergy to increase coal volume from third-party mines, supported by well-integrated infrastructure facilities."

William added that RMKO is starting to feel the tangible positive impact from the completion and operation of RMKE's hauling road facility. This momentum is further strengthened by the local government regulation prohibiting the use of public roads for coal transport, effective since January 1, 2026, thus making the hauling road vital infrastructure.

Optimistic Target for 2026

Entering 2026, one of RMKO's strategic focuses is to enhance synergy with RMKE's business operations, as new clients increasingly utilize the hauling road. "We target to increase TLS volume to 3.6 million tons and boost hauling road transport volume to 1.8 million tons this year," explained William. "With this solid strategy, we are confident that RMKO will soon transition from the investment phase to a more mature operational phase, and deliver sustainable growth for all stakeholders," William concluded.
